VTKeys2 Large character USB Keyboard with LED light
Black letters on yellow keys

Description

High Quality Large Print Keyboard for Low Vision Users

VTKeys2 is a large character keyboard with high contrast lettering and background colours that make seeing the keys much easier than on a standard keyboard. The lettering on the keys is 4 times larger than standard keyboard print and all characters are in upper case to maximise their clarity.

They also include an innovative flexible LED strip light which connects into one of the integrated side USB ports. This allows a low vision user to illuminate the keys, improving the contrast still further, making them even easier to see.

Key Features
