

Mousetrapper Advance 2

Advance 2.0 relieves and prevents repetitive strain injuries and other problems that can occur when you use a conventional mouse. Because Mousetrapper is positioned centrally in front of the keyboard it encourages an ergonomically healthy position that keeps your arms close to your body and your hands near the keyboard. It eliminates the need to stretch beyond the keyboard while using the mouse. The wide, cushioned wrist supports also relieve strain on your neck, shoulders, arms and wrists

Mousetrapper Advance 2.0 is the successor to the very popular Mousetrapper advance model. A total of six programmable buttons give you more options for setting up Mousetrapper to work exactly the way you want. The cursor speed has also increased and there is now a completely new scroll function, with buttons for scrolling up and down. The downloadable MT Keys software has also been upgraded with significantly more features for advance 2.0.

Mousetrapper Advance 2.0 has a folding keyboard support, which makes it equally compatible with new low-profile keyboards and higher-profile standard keyboards.
