

IntegraMouse Plus with Magic Arm

Description

The ideal aid for those needing to operate the PC by mouth.

The IntegraMouse Plus is a highly sensitive mouse controlled entirely by the mouth. No software is required and typing is done either with OnScreen virtual keyboard or Dragon software for voice recognition and control.

The unit is supplied complete with the Magic Arm mounting system. Magic Arm can be purchased separately (part code: A-MA). To use, the operator simply moves the mouthpiece by applying pressure with the lips. Mouse-clicks with the left or the right mouse button are achieved by very slight sucking or blowing.

Suitable for people who would like to operate the computer but have a high level of paralysis, have both arms amputated or with progressive illnesses such as Muscular Dystrophy or Multiple Sclerosis.
